
Greenfield Local Hub Paired Code Review

* Obligatoriskt

Technical Background

Share your experience and expertise

1. What best describes your technical background? *

- ◯ Student developer
- ◯ Web developer
- ◯ Software engineer
- ◯ Database developer
- ◯ Tester or QA
- ◯ Teacher or assessor
- ◯ Other

2. How familiar are you with ASP.NET Core MVC? *

1	2	3	4	5

Unfamiliar Familiar

3. How familiar are you with Entity Framework Core? *

1	2	3	4	5

Unfamiliar Familiar

4. How familiar are you with ASP.NET Core Identity and role-based access control? *

1	2	3	4	5

Unfamiliar Familiar

5. How familiar are you with Razor syntax and Tag Helpers in MVC views? *

1	2	3	4	5

Unfamiliar Familiar

6. How familiar are you with front-end web development including HTML, CSS and JavaScript? *

1	2	3	4	5

Unfamiliar Familiar

7. Have you reviewed or tested an MVC web application before? *

- ◯ Yes
- ◯ No
- ◯ Not sure

8. Which areas of the web application did you review? *

- [ ] Code structure
- [ ] Models
- [ ] Views
- [ ] Controllers
- [ ] Database
- [ ] Security
- [ ] User interface
- [ ] Checkout
- [ ] Producer dashboard
- [ ] Accessibility features

9. How confident are you in the feedback you are providing? *

1	2	3	4	5

Unconfident Confident

10. Is there any technical context about your background that may be useful before reading your feedback?

Overall Architecture

Share your assessment of the project structure, folder organisation and compliance to MVC conventions

11. How clear is the overall MVC structure of the project? *

1	2	3	4	5

Unclear Clear

12. Does the project separate responsibilities clearly between models, views and controllers? *

- ◯ Yes
- ◯ No
- ◯ Mostly
- ◯ Partly
- ◯ Not sure

13. How suitable is ASP.NET Core MVC as the framework choice for this web application? *

1	2	3	4	5

Suitable Unsuitable

14. How easy was it to understand the purpose of the application from the code structure alone? *

1	2	3	4	5

Difficult Easy

15. Are the main project folders named and organised in a clear and logical way? *

- ◯ Yes
- ◯ No
- ◯ Mostly
- ◯ Partly

16. How well do the naming conventions used throughout the codebase follow C# and ASP.NET Core standards? *

1	2	3	4	5

Inconsistent Consistent

17. **Note**: the project uses lower camelCase for model class names and property names (e.g. productsId, shoppingCart, loyaltyAccount) rather than the standard C# PascalCase convention. How much of a concern is this for maintainability and readability? *

1	2	3	4	5

High concern Low concern

18. How easy would it be for another developer to add a new feature to this project in its current state? *

1	2	3	4	5

Difficult Easy

19. Does the project appear to follow common ASP.NET Core conventions? *

- ◯ Yes
- ◯ No
- ◯ Mostly
- ◯ Not sure

20. Which part of the architecture seems strongest?

21. Which part of the architecture seems weakest or most in need of improvement?

22. What single architectural improvement would have the biggest positive impact on this project?

Models & Database Design

Evaluate the data models, relationships, naming and suitability of the database design

23. How clear are the model classes used for products, producers, orders and shopping carts? *

1	2	3	4	5

Unclear — Clear

24. Are the relationships between products, producers, categories, carts and orders easy to understand? *

1	2	3	4	5

Difficult — Easy

25. Does the database design support the website's main user journeys? *

- ◯ Yes
- ◯ No
- ◯ Mostly
- ◯ Partly
- ◯ Not sure

26. How suitable are the model class names and property names for a professional codebase? *

1	2	3	4	5

Suitable — Unsuitable

27. Are there any model names or property names that should be renamed for clarity or convention compliance?

28. How well does the product model support a local food product catalogue? *

1	2	3	4	5

Poor support — Excellent support

29. How well does the producer model support storing information about local suppliers? *

1	2	3	4	5

Poor support — Excellent support

30. How well does the order model support checkout, order history and fulfilment tracking? *

1	2	3	4	5

Poor support — Excellent support

31. How well does the shopping cart model support adding, removing and adjusting product quantities? *

1	2	3	4	5

Poor support — Excellent support

32. How well does the loyalty account model support the points, tiers and offers rewards feature? *

1	2	3	4	5

Poor support — Excellent support

33. The application currently uses float for price and total amount fields. Should these be changed to decimal for accuracy with monetary values? *

- ◯ Yes
- ◯ Yes, but it is a low priority
- ◯ No
- ◯ Not sure

34. Are data validation attributes used well enough on the model properties? *

1	2	3	4	5

Poor — Well-applied

35. Which model needs the most improvement? *

- ◯ Products
- ◯ Producers
- ◯ Orders
- ◯ Order products
- ◯ Shopping cart
- ◯ Addresses
- ◯ Loyalty account
- ◯ Categories
- ◯ Other

36. What specific model or database improvement would you recommend addressing first?

37. Are there any database fields that appear unnecessary, redundant or missing entirely?

38. How confident are you that the current database design could support future features such as reviews, discount codes or delivery tracking? *

1	2	3	4	5

Unconfident Confident

Controllers & Business Logic

Assess the clarity, structure and appropriateness of the controller actions and application logic

39. How clear is the logic inside the main controllers overall? *

1	2	3	4	5

Unclear Clear

40. Do the controllers maintain a suitable balance between handling page requests and containing business logic? *

1	2	3	4	5

Poor Excellent

41. How easy is it to follow the product browsing and filtering flow in the products controller? *

1	2	3	4	5

Difficult Easy

42. How easy is it to follow the shopping basket and cart item logic? *

1	2	3	4	5

Difficult Easy

43. How easy is it to follow the checkout and order creation logic in the orders controller? *

1	2	3	4	5

Difficult Easy

44. How easy is it to follow the producer dashboard logic? *

1	2	3	4	5

Difficult Easy

45. How easy is it to follow the loyalty account and rewards logic? *

1	2	3	4	5

Difficult Easy

46. Are controller action names clear enough to understand their purpose without reading the code? *

- ◯ Yes
- ◯ No
- ◯ Mostly
- ◯ Partly

47. Are there controller actions that contain too much code and should be refactored or simplified? *

- ◯ Yes
- ◯ No
- ◯ Not sure

48. If Yes, which controller actions should be simplified or refactored? *

49. How well are database queries written and used inside the controllers? *

1	2	3	4	5

Poor Excellent

50. Are related data includes and navigation properties loaded in a clear and appropriate way? *

1	2	3	4	5

Unclear Clear

51. How well does the application handle missing records or invalid IDs gracefully? *

1	2	3	4	5

Poor Excellent

52. How well does the application prevent users from accessing or modifying data that does not belong to them? *

1	2	3	4	5

Poor Excellent

53. Should business logic such as discount calculations, loyalty points and delivery fees be moved into separate service classes rather than staying inside controllers? *

- ◯ Yes
- ◯ Yes, but it is a lower priority
- ◯ No
- ◯ Not sure

54. What controller or business logic issue should be addressed first?

Views, Razor Pages & User Interface

Review the quality, consistency and effectiveness of the front-end pages and visual presentation

55. How clear and consistent are the Razor views across the application? *

1	2	3	4	5

Unclear Clear

56. How suitable is the overall visual design and layout for a local food hub website? *

1	2	3	4	5

Unsuitable Suitable

57. How easy is it to navigate between the main pages of the application? *

1	2	3	4	5

Difficult Easy

58. How effective is the product catalogue layout for browsing products? *

1	2	3	4	5

Ineffective Effective

59. How effective is the product details page at communicating product information? *

1	2	3	4	5

Ineffective Effective

60. How effective are the producer profile pages? *

1	2	3	4	5

Ineffective Effective

61. How effective is the shopping basket page? *

1	2	3	4	5

Ineffective Efffective

62. How effective is the checkout page layout and flow? *

1	2	3	4	5

Ineffective Effective

63. How effective is the producer dashboard layout and tab structure? *

1	2	3	4	5

Ineffective Effective

64. How clear are the forms for creating and editing products? *

1	2	3	4	5

Unclear Clear

65. Are labels, buttons and headings written in clear and appropriate language for users? *

- ◯ Yes
- ◯ No
- ◯ Mostly
- ◯ Partly

66. How consistent is the styling and visual design across the public-facing pages and account management pages? *

1	2	3	4	5

Inconsistent Consistent

67. Are there any pages where the user interface feels unfinished, inconsistent or confusing?

68. How well does the site work as a visually complete and polished product overall? *

1	2	3	4	5

Poor Excellent

69. What view or page should be improved first and why?

Authentication, Roles & User Accounts

Evaluate how well the application manages identity, permissions and access control across user types

70. How well does the website separate the responsibilities and permissions of customer, producer and admin users? *

1	2	3	4	5

Poor Excellent

71. Are the ASP.NET Core Identity login and registration pages suitable for the website? *

1	2	3	4	5

Unsuitable Suitable

72. How clear and usable is the account management area? *

1	2	3	4	5

Unclear Clear

73. Are role-based access restrictions applied consistently across the application? *

- ◯ Yes
- ◯ No
- ◯ Mostly
- ◯ Partly
- ◯ Not sure

74. Are there any pages that should require a user to be logged in but currently appear publicly accessible?

75. Are there any pages that should be restricted to admin or producer users but are not currently?

76. How serious would it be if authentication middleware were missing or misconfigured in a production deployment of this application? *

1	2	3	4	5

Extremely serious Not serious

77. How well does the application protect customer account and personal information? *

1	2	3	4	5

Poor Excellent

78. How well does the application protect producer-only features from being accessed by customers or unauthenticated users? *

1	2	3	4	5

Poor Excellent

79. What is the most important authentication or role management improvement needed?

Security & Data Protection

Identify security risks, vulnerabilities and data protection concerns in the current prototype

80. How secure does the web application appear overall? *

1	2	3	4	5

Insecure Secure

81. The application currently stores a Google OAuth client secret inside appsettings.json. How serious a security risk is this? *

1	2	3	4	5

Extremely serious Not Serious

82. Should OAuth secrets and connection strings be moved to environment variables or .NET user secrets before deployment? *

- ◯ Yes
- ◯ Yes, but it is a lower priority
- ◯ No
- ◯ Not sure

83. How well does the application protect order details from being viewed by the wrong user? *

1	2	3	4	5

Poor Excellent

84. How well does the application protect address details from being viewed or edited by the wrong user? *

1	2	3	4	5

Poor Excellent

85. How well does the application protect producer dashboard data from unauthorised access? *

1	2	3	4	5

Poor Excellent

86. Are delete and edit actions protected well enough against unauthorised use? *

- ◯ Yes
- ◯ No
- ◯ Mostly
- ◯ Partly
- ◯ Not sure

87. Does the site appear to handle anti-forgery token protection correctly on all forms? *

- ◯ Yes
- ◯ No
- ◯ Mostly
- ◯ Partly
- ◯ Not sure

88. Are error messages and exception details safe and not exposing sensitive technical information to end users? *

1	2	3	4	5

Unsafe Safe

89. What security issue should be treated as the highest priority before this application is deployed?

90. What security test would you recommend carrying out first on this application?

91. After the identified security issues are fixed, how confident would you be using this application with real customer data? *

1	2	3	4	5

Not confident Confident

Shopping Basket, Checkout & Orders

Assess the technical reliability and user experience of the core e-commerce purchasing flow

92. How clear is the cart workflow from the product page through to checkout completion? *

1	2	3	4	5

Unclear Clear

93. How well does the basket handle quantity changes and item removal? *

1	2	3	4	5

Poor Excellent

94. How well does the checkout process match what users would expect from an e-commerce website? *

1	2	3	4	5

Poor Excellent

95. How clear is the address selection and delivery address management process? *

1	2	3	4	5

Unclear Clear

96. The application currently saves the order to the database before completing the final stock availability check. How serious a technical risk is this? *

1	2	3	4	5

Serious Not serious

97. How well does the checkout process validate user inputs before allowing an order to be placed? *

1	2	3	4	5

Poor Excellent

98. How clear is the order history and order details experience for customers? *

1	2	3	4	5

Unclear Clear

99. How well are delivery fee calculations and order totals presented to the user? *

1	2	3	4	5

Poor Excellent

100. Are there any checkout steps that should be made technically safer or more user friendly?

101. What is the biggest technical risk in the cart or checkout flow as it currently stands?

102. What single checkout improvement would most improve user trust and confidence in the system?

Producer Features & Product Management

Evaluate the dashboard tools and workflows available to producer users for managing their listings and orders

103. How useful is the producer dashboard for managing a local supplier account? *

1	2	3	4	5

Not useful — Useful

104. How clear are the dashboard tabs, statistics and summary information? *

1	2	3	4	5

Unclear — Clear

105. How well does the product create and edit flow support producers in managing their listings? *

1	2	3	4	5

Poor — Excellent

106. How well does the dashboard support stock level monitoring and management? *

1	2	3	4	5

Poor — Excellent

107. How well does the dashboard support viewing, filtering and updating order statuses? *

1	2	3	4	5

Poor — Excellent

108. Are producer users sufficiently prevented from managing products, orders or data that do not belong to them? *

- ◯ Yes
- ◯ No
- ◯ Mostly
- ◯ Partly
- ◯ Not sure

109. What producer dashboard feature needs the most improvement?

110. What additional feature would make the producer dashboard more useful for real suppliers?

Accessibility & Front-End Behaviour

Review the accessibility features, responsive design and client-side behaviour of the application

111. How useful is the dark mode feature for users with visual preferences? *

1	2	3	4	5

Not useful — Useful

112. How useful is the high contrast mode for users with visual impairments? *

1	2	3	4	5

Not useful — Useful

113. How useful are the text size increase and decrease controls? *

1	2	3	4	5

Not useful — Useful

114. How useful is the read page or text-to-speech feature for accessibility? *

1	2	3	4	5

Not useful — Useful

115. How well do the accessibility controls integrate into the overall site design without disrupting the layout? *

1	2	3	4	5

Poor — Excellent

116. How well does the website support keyboard-only navigation? *

1	2	3	4	5

Poor — Excellent

117. How clear and visible are hover, focus and active states on buttons, links and form elements? *

1	2	3	4	5

Unclear — Clear

118. How responsive and usable does the site appear on smaller screen sizes such as tablets and mobile phones? *

1	2	3	4	5

Unresponsive — Responsive

119. Are there any front-end scripts or JavaScript behaviours that seem unnecessary, unreliable or potentially problematic?

120. What accessibility improvement would have the biggest impact on the widest range of users?

Validation, Error Handling & Reliability

Assess how well the application handles user input, edge cases and unexpected behaviour

121. How well are user inputs validated across the forms in the application? *

1	2	3	4	5

Poor Excellent

122. How clear and helpful are the validation error messages shown to users? *

1	2	3	4	5

Unclear Clear

123. How well does the site handle invalid or non-existent product, order or address IDs in the URL? *

1	2	3	4	5

Poor Excellent

124. How well does the site recover gracefully from common user mistakes such as empty form submissions? *

1	2	3	4	5

Poor Excellent

125. How well does the site handle edge cases such as an empty basket or missing checkout data? *

1	2	3	4	5

Poor Excellent

126. How reliable does the client-side form validation behaviour appear across the checkout and product forms? *

1	2	3	4	5

Unreliable Reliable

127. What validation rule should be added or improved first?

128. What reliability issue would you prioritise testing first?

Testing, Maintainability & Future Development

Share your views on the project's readiness for testing, deployment and continued development

129. How maintainable is the project in its current state for a developer continuing the work? *

1	2	3	4	5

Unmaintainable — Maintainable

130. How easy would it be to write automated unit or integration tests for the main features? *

1	2	3	4	5

Difficult — Easy

131. Which feature area should have automated tests written first? *

- ◯ Login and role access
- ◯ Product catalogue
- ◯ Shopping cart
- ◯ Checkout and orders
- ◯ Producer dashboard
- ◯ Address management
- ◯ Loyalty rewards system

132. How important is adding automated tests before any further development takes place? *

1	2	3	4	5

Not important — Important

133. How clear and useful are the seeded demo users and sample product data for testing purposes? *

1	2	3	4	5

Unclear — Clear

134. How suitable is the use of a local SQL Server database for this development version of the application? *

1	2	3	4	5

Unsuitable — Suitable

135. How ready would this project be for deployment after the identified security and code issues are resolved? *

1	2	3	4	5

Not ready — Ready

136. Which technical improvement should be addressed first? *

- ◯ Add or verify authentication middleware
- ◯ Move secrets out of appsettings.json
- ◯ Fix role and ownership checks across controllers
- ◯ Fix checkout stock validation order
- ◯ Change money fields from float to decimal
- ◯ Add automated tests
- ◯ Improve form validation
- ◯ Refactor controller business logic into services
- ◯ Improve naming conventions

137. Please explain why you selected that as the most important first improvement. *

138. How confident are you that this project could be made production-ready with a reasonable amount of further work? *

1	2	3	4	5

Not confident — Confident

139. What is the strongest technical aspect of this project overall?

140. What is the weakest technical aspect of this project overall?

141. What single change would most improve the experience for real users of this application? *

142. Any final technical feedback, observations or recommendations you would like to add?
